DETAILED ACTION

1. This office action is in response to the amendment of August 22, 2007. In making the below rejections and/or objections the examiner has considered and addressed each of the applicant's arguments.
2. The request for a continued prosecution application (CPA) under 37 CFR 1.53(d) filed on [1] is acknowledged. 37 CFR 1.53(d)(1) was amended to provide that the CPA must be for a design patent and the prior application of the CPA must be a design application that is complete as defined by 37 CFR 1.51(b). See *Elimination of Continued Prosecution Application Practice as to Utility and Plant Patent Applications*, final rule, 68 *Fed. Reg.* 32376 (May 30, 2003), 1271 *Off. Gaz. Pat. Office* 143 (June 24, 2003). Since a CPA of this application is not permitted under 37 CFR 1.53(d)(1), the improper request for a CPA is being treated as a request for continued examination of this application under 37 CFR 1.114.

EXAMINER'S AMENDMENT

3. The application has been amended as follows: claim 3 recites the following "The pressure intensifier according to claim 3." As stated on page 8 (Remarks section paragraph 4) of the amendment of August 22, 2007, the applicant's intended that claim 3 recite the following --- The pressure intensifier according to claim 1 --- and is hereby amended by the examiner.

Allowable Subject Matter

4. Claims 1, and 3-10 are allowed.
5. The following is an examiner's statement of reasons for allowance: the prior fails to teach or suggest a pressure intensifier including an intensifier piston provided with a high pressure piston defining a high pressure chamber within a high pressure cylinder, and a low pressure piston defining a low pressure chamber within a low pressure cylinder, the high-

pressure piston moveably arranged in the high-pressure cylinder, a control valve provided with a first and a second control line, the high pressure piston opens or closes a first connection between a first control line and a second control line, said first connection being arranged completely within a movement stroke of the high-pressure piston, and a control valve having a first switching position and a second switching position controlled by a position of the intensifier piston wherein in the second switching position of the switching valve a low pressure chamber bounded by the low pressure piston and the low pressure cylinder is connected by a connecting path with a chamber between the high pressure piston and the low pressure piston in combination with first and second control lines having openings in a wall of the high-pressure cylinder in an area that, independent of a position of the intensifier piston, is located outside of the high-pressure chamber or a second connection opening at a circumferential wall of the low pressure cylinder in an area of an end face of the low pressure cylinder.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure are cited on form 892 herewith.
